FBIS-2430/88
07 July 1988

MEMORANDUM FOR: Chief, Communications Engineering Division, OIT

FROM: Chief, Engineering Support Group, FBIS

SUBJECT: Connectivity Requirements for Classified AFS
Profilers

1. The purpose of this letter is to request four Classified AFS data circuits be added to those identified in earlier requirement letters to OIT/CED. According to representatives of OIT/CED, those earlier requirements made use of only [] out of the [] data circuits allocated to FBIS by OIT. It seems reasonable that the new requirement can be met using four of the remaining seven allocated circuits.

STAT

2. The locations for the four circuits in [] are identified below. All are to be configured as nailed rather than dial-up circuits.

STAT

<u>Room</u>	<u>Secure Jack</u>	<u>Secure Extension</u>
[]		

STAT

3. The host terminal servers have 448 ports, all of which are assigned to previously defined nailed or dial-up circuits. Four ports need to be reassigned to the new circuits, causing four other circuits to be disconnected. The circuits to be disconnected are:

<u>Room</u>	<u>Secure Jack</u>	<u>Secure Extension</u>
[]		

STAT

FBIS-2430/88

Subject: Connectivity Requirements for Classified AFS Profilers

4. The hardware for the four disconnected circuits should remain in place. Those circuits will be needed when FBIS expands the number of terminal server ports to accomodate additional AFS users.

5. If you have any questions, please contact me at
